Company and Technology

“After intensive benchmarking we have chosen You-R® OPEN as basis for our Solutions“

Volker Klaas, Global Competence Center AutoID/RFID – Siemens IT Solutions and Services

„RF-IT Solutions in my view is clear market leader in RFID Software for Fashion“

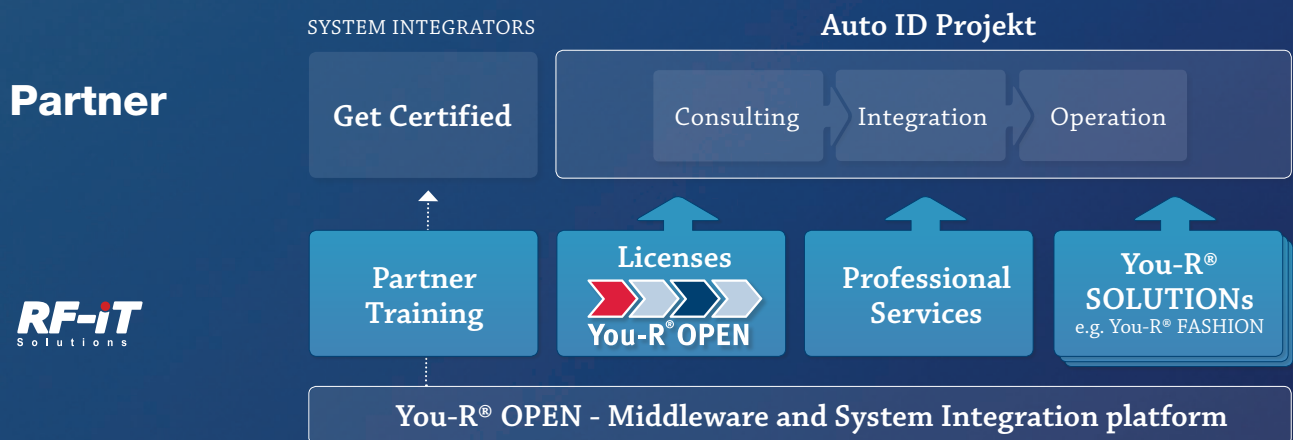

Rainer Jilke, Projekt Manager RFID – Karstadt

„You-R OPEN is the basis for our Auto ID Managed Service Concept“

Christian Fritz, Business Manager RFID - Telekom Austria

„You-R® OPEN allows our ERP System to support RFID in practice“

Michael Plohnke - CEO Texdata

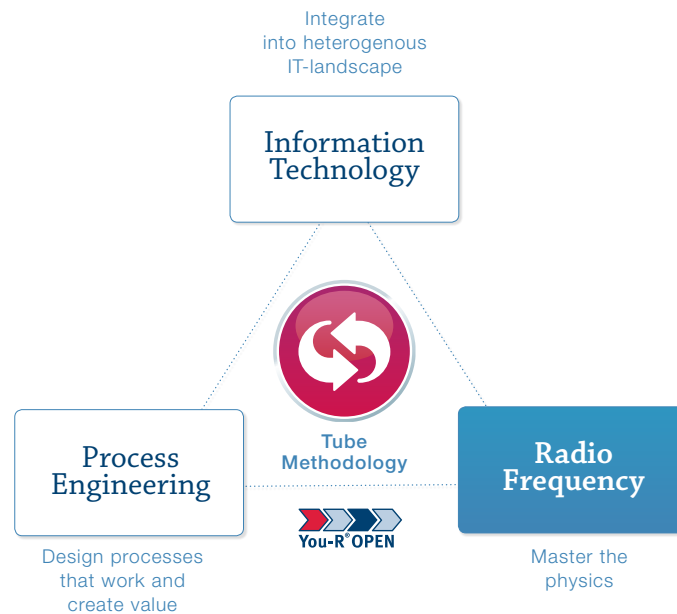

About RF-iT Solutions

RF-iT Solutions GmbH, Graz, Austria, a firm active in the area of RFID software, solutions and services, was founded in 2005 through a management buy-out of the “RFID Software and Solutions” business division of Infineon AG. RF-iT Solutions is the market leader in the fashion and automotive industries. The company provides RFID middleware, solutions and technology consultancy, devising comprehensive communications solutions to link together business processes, RFID technology and IT. With a staff of 25, the company is focused on the marketing and continued development of You-R® OPEN, a scalable Auto-ID software product and the world’s leading RFID operating environment, which serves as a platform for system integrators, software manufacturers and operators.

RF-iT Solutions provides system integrators with comprehensive technology consulting, serving them as a technical backbone, so that business processes that have been optimized in theory will also work when implemented in practice. In combination with the knowledge of industry experts, You-R® OPEN enables partners to provide global RFID solutions quickly, with the necessary expertise, thus allowing them to focus on added value for their customers. The company operates the “RFID/EPCglobal Test Center”. On the basis of the convincing features of You-R® OPEN, including its functionalities and capacity for integration, the company was awarded the valued European Auto-ID Award in the category of RFID in 2006 as well as the German Innovation Award in 2007.

at its best.

Tubes - Customizable Solution Elements

The definition of a working communication channel from RFID-tag to IT is called TUBE. TUBEs contain tags, data models, antennas, readers, smoothing, filtering, scenarios, IT interfaces and all parameters required by the different objects. RF-iT's unique TUBE Methodology allows easy handling of RFID infrastructures by the system integrator. You-R[®] OPEN is the OPerating ENvironment to develop, deploy, operate, manage and upgrade TUBEs.

Business processes have to be reengineered to create ROI. This is the scope of business process consultants. The aspects of RF communication and technology are the key to master the physics. The limits of the technology are important in the business process details, otherwise processes are designed which don't work. That is why RF-iT Solutions offers technology consulting to our system integrators and their business process consultants. Data generated by the RFID infrastructure and defined business processes has to be integrated into a heterogenous IT landscape. Typical IT companies underestimate the RF technology issues and RF companies underestimate the IT complexity involved.

You-R[®] OPEN and RFID works

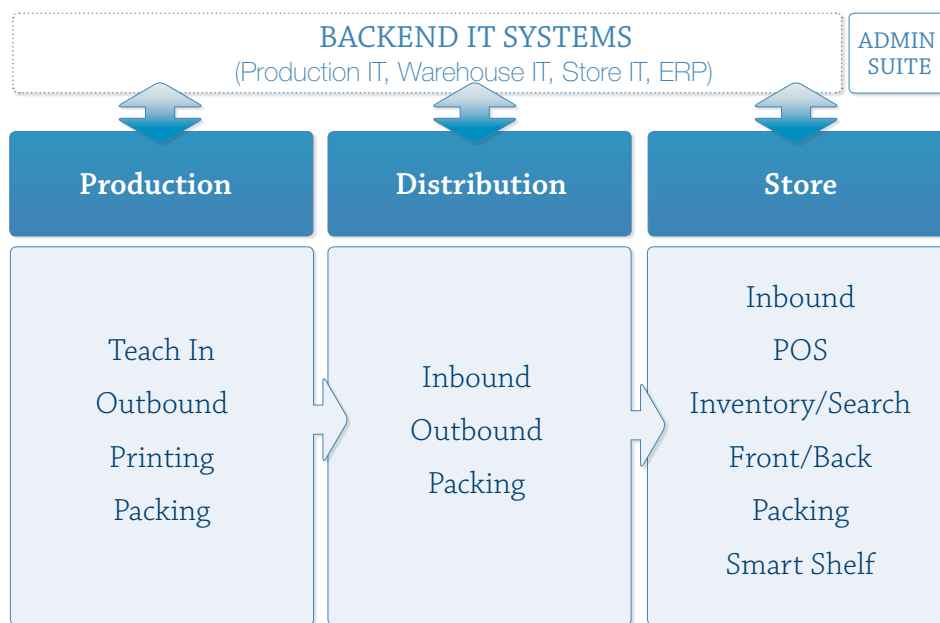

Like a PC needs an operating system a distributed RFID infrastructure requires an RFID OPerating ENvironment. You-R[®] OPEN is the OPerating ENvironment to tune, integrate, run and maintain RFID TUBEs.

It provides an environment to manage distributed multi-site, multi-company RFID infrastructure. You-R[®] OPEN is tag and reader neutral and supports the major RFID technologies and standards needed for RFID solutions. It includes several functions and supports EPC as well as DOT (data on tag).

A key feature is the ease of integration into business process software and legacy systems. You-R[®] OPEN makes RFID process management and application software operating vendors independent from the RFID technology used and the device or chip manufacturer. Specific functions preprocess RFID and other device data. Additionally, user programmed scenarios give a high level of flexibility to the application-oriented preprocessing and combination of multiple devices.

You-R® Fashion

You-R OPEN based Solution Modules for the whole supply chain

You-R® OPEN based Solutions provide flexibility and unique business benefits

You-R® SOLUTIONs provide unique business benefits utilising the power of RFID technology in plug and play like solution building blocks (TUBEs). For identification points of different verticals RF-iT Solutions has developed a set of TUBEs which can be combined as needed in the defined business processes. The field proven TUBEs speed up the project realization and reduce risk and cost of system integration.

TUBEs as pre-packaged front-end applications support the backend business process of an end to end solution provided by our partners.

You-R® FASHION for example consists of TUBEs for Printing, Teach In, Packing, Inbound, Outbound, Inventory, Front/back store, POS. A system integrator can choose the required elements out of You-R® FASHIONs TUBE library.

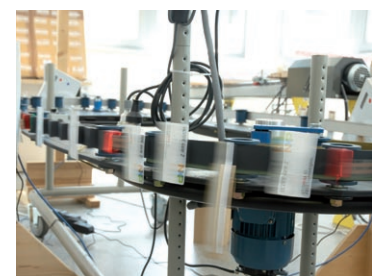

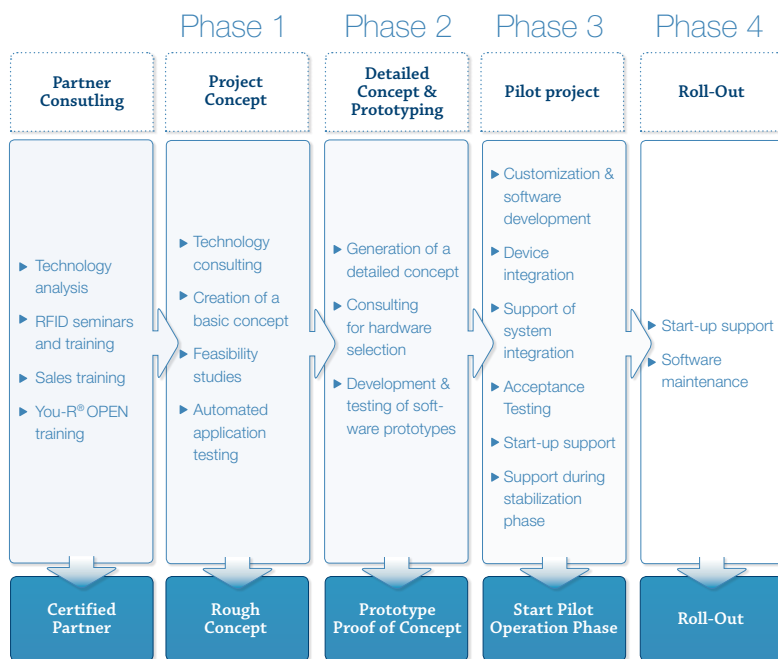

The powerful You-R® OPEN middleware platform allows fast customization and flexible enhancements using C# based control logic. TUBEs can easily follow technology enhancements over time due to the technology and manufacturer-neutral device integration of You-R® OPEN. You-R® OPEN Administration Suite is used as a central management tool for the solution infrastructure reducing the total cost of ownership by lowering maintenance cost over system lifetime.

Our Services for successful Projects

Our RF-iT Solutions Team has many years of experience in the successful implementation of RFID projects with the aid of our own specially produced software You-R® OPEN. The team acts as a counsellor and technology consultant for our solution partners. Furthermore, in addition to pure software, we offer RFID technology consulting on expert level, whereby emerging technologies and products are analyzed in an ongoing process.

We provide individual technology analyses to hardware suppliers and system integrators. We also work closely with them to ensure the ideal combination of software and hardware solutions. We support our partners with business case analysis, feasibility studies, as well as testing use cases. Moreover we provide support for pilot projects and rollouts on various levels.
